

# The Shoper 9 Retail Enterprise Solution

Shoper 9 is a comprehensive retail enterprise solution that helps businesses of all sizes overcome the challenges of increasing competition and rising operational costs. It provides a range of features and capabilities to deliver an unequalled retail experience, from point-of-sale management to inventory control and reporting.

# Alerts Management

## **1** Communicate Critical Information

Configure alerts to send messages for specific events, such as price revisions or sales promotions, to all your showrooms simultaneously. Choose from email, SMS, pop-ups, and more to ensure timely communication.

## **2** Categorize Alerts by Severity

Categorize alerts as fatal, warnings, or information to trigger appropriate user actions based on the urgency of the message.

## **3** Stay Connected Across Locations

Ensure distance doesn't break the chain of communication between your showrooms by using the Alerts Management feature of Shoper 9.

# Alignment with GS1 Standards

Shoper 9 allows you to generate GS1 Standard Numbers for your stock items, based on the Global Trade Identification Numbers (GTIN) assigned to your business. This is particularly beneficial for businesses dealing with international brands or having outlets across the globe, as it enables global trade compatibility and effective stock management.

## Define Numbering Patterns

You can define a pattern or multiple patterns for stock numbering, using pre-defined parameters in adherence to GTIN standards.

## Standardized Methodology

Adopt GTIN, the standardized methodology for numbering of items, to enable global trade compatibility and effective stock management.

# Till Management

Shoper 9's Till Management functionality allows you to quickly enable and easily use tills or POS counters to handle sales-related operations like billing, returns, cancellations, cash receipts, and cash payouts.

## Control Till Operations

Set the status of each till to open, lock, unlock, and close, as required, and enjoy complete control over till operations based on the status set.

## Define Cash Limits

Define cash limits for each till, and receive alerts when the limit is reached to initiate cash lift.

# Inventory Management

## Purchase Orders

Generate purchase orders at the Head Office, distributor, and POS locations based on business requirements.

## Stock Adjustments

Use the physical stock take option to compare physical quantities against book values, adjust discrepancies, and clear negative stock.

## Indent Management

Import purchase orders or indents from POS locations or distributors using XML files, and consolidate them to place a combined order with suppliers.

# Catalogue Management

## Centralized Data

Manage large volumes of retail business data, including products, supply chain network, stores, configurations, and data communication schedules, using centralized catalogues.

## Schemes and Discounts

Pre-define conditions for schemes and discounts in catalogues, and automatically or manually apply them to bills. Use the 'and' clause to build exciting promotions with multiple, non-related items.

## Sales Performance

Boost the efficiency of your Head Office and gain better insights into the performance of sales personnel across showrooms using the centralized sales person management feature.

# Print Engine

## Flexible Configuration

Enable transaction-wise and/or document-wise configuration settings, and override default settings as needed. Select printers on-the-fly and customize printing using TDL.

## Multiple Printing Options

Use different print modes like USB port, winspool, DOS printing, and convert DOS/Text printing to GUI printing.

Shoper 9's Print Engine separates the printing logic from the business logic, allowing you to generate outputs based on your specific configuration and business needs.

# Shoper 9 Components

## Shoper 9 HO

Centralized management of indents, generation of consolidated Purchase Orders, and integration with warehouses.

## Shoper 9 POS

Powerful Point of Sale (POS) software to manage all retail operations in a store or distributor location.

## Customization

Shoper 9 can be customized by Tally Integrators to meet specific business requirements.

## Interfaces

Share and receive data from applications like SAP, Tally.ERP 9, and other custom/legacy software in the required format.
